

# Encapsulated Blinds

Benefit from light and privacy as and when you need

Encapsulated blinds offer superb versatility in all rooms and all types of frame. The blind is encapsulated within two panes of glass, which means they operate in a fully sealed environment guaranteeing the insulating properties of the double glazed unit.

The aluminium slats are controlled using a rotational magnetic chord, which allows the blind to be raised, lowered and tilted. On top of this, the hermetically sealed unit offers total protection against dirt and dust making them a completely maintenance free choice for your home.
